Akpareva Family VC

Investment Projection Report — 2026

Prepared for	Lee Akpareva, Tim Akpareva, Patrick Akpareva
Prepared by	Claude — AI Chief of Staff, NAVADA
Date	26 February 2026
Classification	Confidential — Family Use Only
Model Version	v1.0 — Monte Carlo Projection

Disclaimer: This document contains projected financial outcomes based on Monte Carlo simulation models. Past performance does not guarantee future results. All investments carry risk including the potential loss of capital. This is for educational and planning purposes only and does not constitute financial advice.

Contents

1. Executive Summary

2. Investment Structure

3. Scenario Definitions & Asset Allocation

4. 12-Month Portfolio Growth Projections

5. Monthly Returns Analysis

6. Monte Carlo Simulation & Confidence Bands

7. Profit & Loss Summary

8. Risk vs Reward Analysis

9. Operational Framework

10. Next Steps & Recommendations

1. Executive Summary

This report presents a detailed financial projection for the proposed Akpareva Family Venture Capital initiative. The model analyses three distinct investment strategies over a 12-month test period, with each of the three members contributing £100 per month (£300/month pooled capital).

The purpose of this test phase is to validate the family's collective ability to make sound investment decisions, establish governance frameworks, and build a documented track record — all at a manageable level of financial commitment.

Using Monte Carlo simulation (500 runs per scenario), we project portfolio outcomes across Conservative, Moderate, and Aggressive strategies, providing realistic expectations for returns, risk exposure, and potential drawdowns.

Metric	Conservative	Moderate	Aggressive
Total Invested	£3,600	£3,600	£3,600
Projected Final Value	£4,111	£4,933	£6,445
Projected P&L	£511	£1,333	£2,845
ROI	14.2%	37.0%	79.0%
Monthly Volatility	3%	7%	15%
Max Drawdown Risk	-8%	-18%	-35%

2. Investment Structure

The Akpareva Family VC operates as a simple pooled investment vehicle with equal contributions and equal decision-making authority among all three members.

Parameter	Detail
Members	Lee Akpareva, Tim Akpareva, Patrick Akpareva
Monthly Contribution	£100 per member
Monthly Pool	£300 (combined)
Annual Deployment	£3,600 total capital
Decision Model	Consensus — all members vote on each investment
Review Cycle	Monthly performance review, quarterly strategy review
Test Duration	6–12 months (initial phase)
Exit Clause	Any member may exit with 30 days notice; capital returned pro-rata
Reporting	Monthly P&L statement + portfolio dashboard (AI-generated)
Research Support	NAVADA AI — market analysis, due diligence, trend monitoring

3. Scenario Definitions & Asset Allocation

Scenario: Conservative

Low-risk diversified approach — index funds, blue-chip ETFs, bonds. Steady compounding with minimal downside risk.

Asset Class	Allocation
Index Funds / ETFs	50%
Blue-Chip Stocks	25%
Bonds / Fixed Income	15%
Cash Reserve	10%

Scenario: Moderate

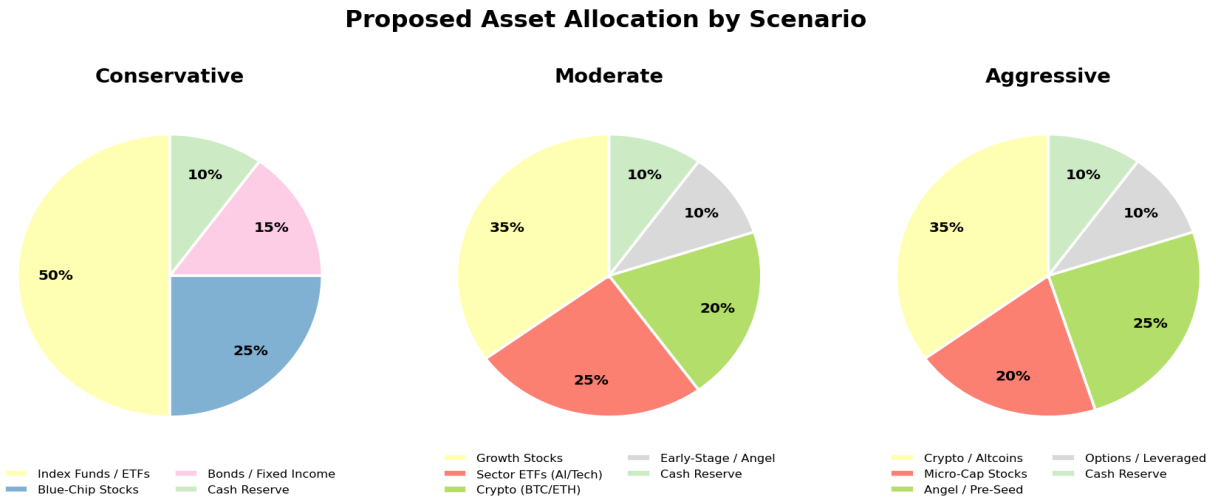
Balanced risk — growth stocks, sector ETFs, selective crypto, and small startup positions. Higher upside with managed risk.

Asset Class	Allocation
Growth Stocks	35%
Sector ETFs (AI/Tech)	25%
Crypto (BTC/ETH)	20%
Early-Stage / Angel	10%
Cash Reserve	10%

Scenario: Aggressive

High-risk, high-reward — concentrated crypto, micro-cap stocks, angel investments, and speculative bets. Potential for significant gains but with substantial drawdown risk.

Asset Class	Allocation
Crypto / Altcoins	35%
Micro-Cap Stocks	20%
Angel / Pre-Seed	25%
Options / Leveraged	10%
Cash Reserve	10%



Proposed Asset Allocation by Scenario

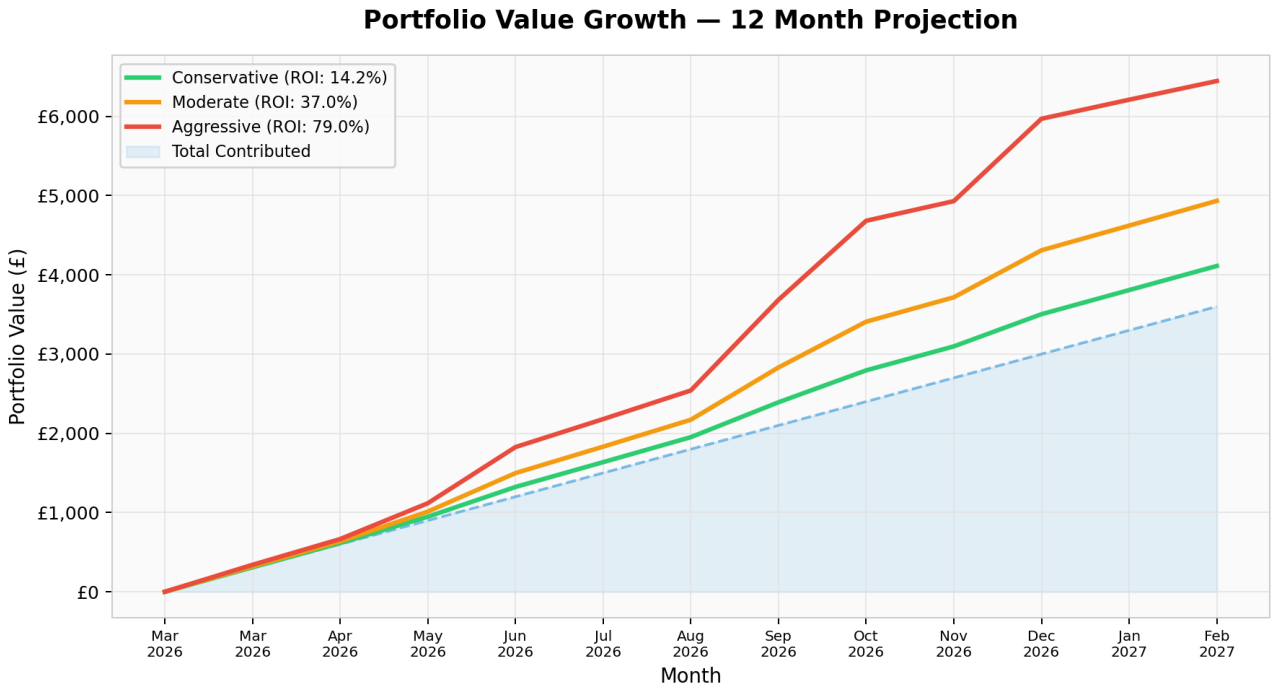
4. 12-Month Portfolio Growth Projections

The chart below shows projected portfolio value over 12 months under each scenario, compared against the cumulative capital contributed (blue dashed line). Any value above the contribution line represents profit; below represents loss of capital.

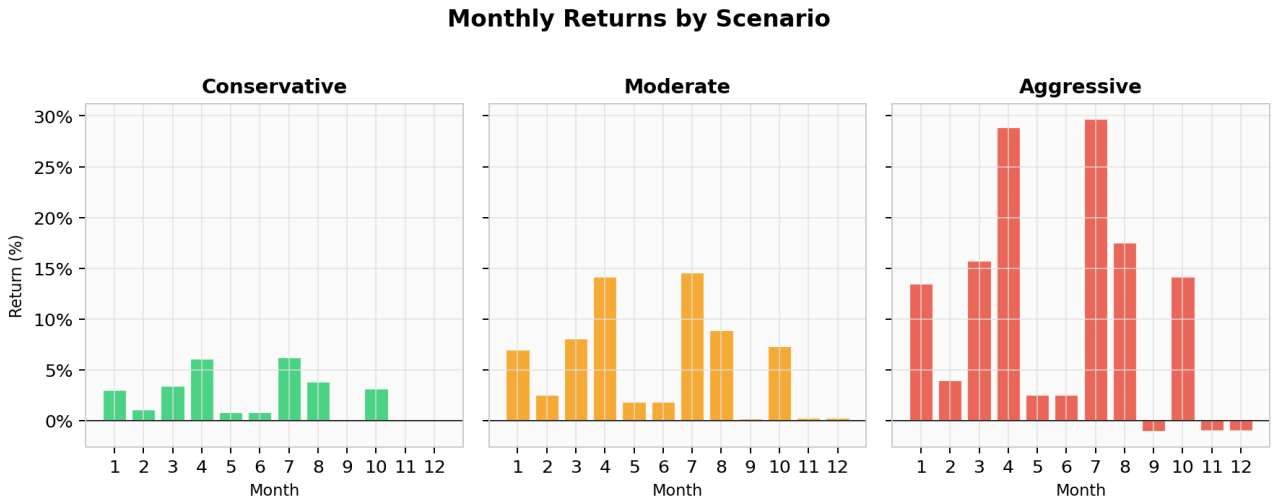


Monthly Portfolio Breakdown

Month	Contributed	Conservative	Moderate	Aggressive
Mar 2026	£300	£309	£321	£340
Apr 2026	£600	£616	£637	£665
May 2026	£900	£947	£1,012	£1,117
Jun 2026	£1,200	£1,323	£1,498	£1,826
Jul 2026	£1,500	£1,636	£1,831	£2,179
Aug 2026	£1,800	£1,951	£2,171	£2,541
Sep 2026	£2,100	£2,392	£2,830	£3,684
Oct 2026	£2,400	£2,794	£3,408	£4,682
Nov 2026	£2,700	£3,097	£3,716	£4,930
Dec 2026	£3,000	£3,503	£4,309	£5,969
Jan 2027	£3,300	£3,807	£4,621	£6,209
Feb 2027	£3,600	£4,111	£4,933	£6,445

5. Monthly Returns Analysis

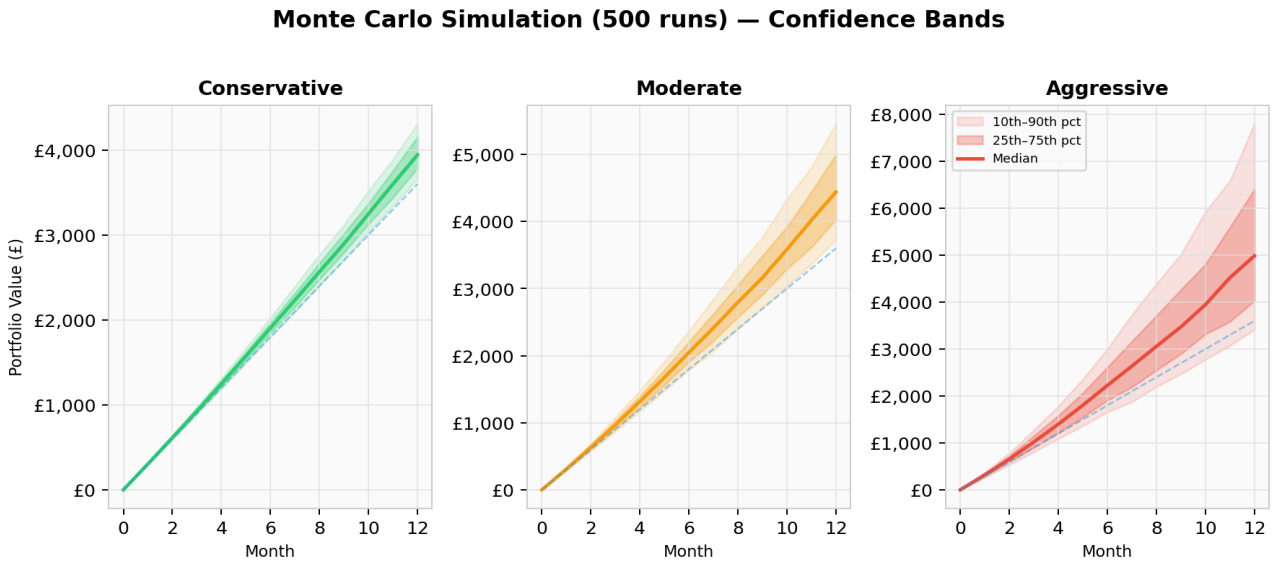
Individual monthly returns vary based on market conditions and volatility. Green bars indicate positive months; red bars indicate drawdowns. The Aggressive scenario shows wider swings — both larger gains and steeper losses.



6. Monte Carlo Simulation & Confidence Bands

To account for uncertainty, we ran 500 independent simulations for each scenario using stochastic monthly returns. The shaded bands show the range of likely outcomes:

Dark band: 25th to 75th percentile (50% of outcomes fall here)
Light band: 10th to 90th percentile (80% of outcomes fall here)
Solid line: Median (50th percentile) outcome

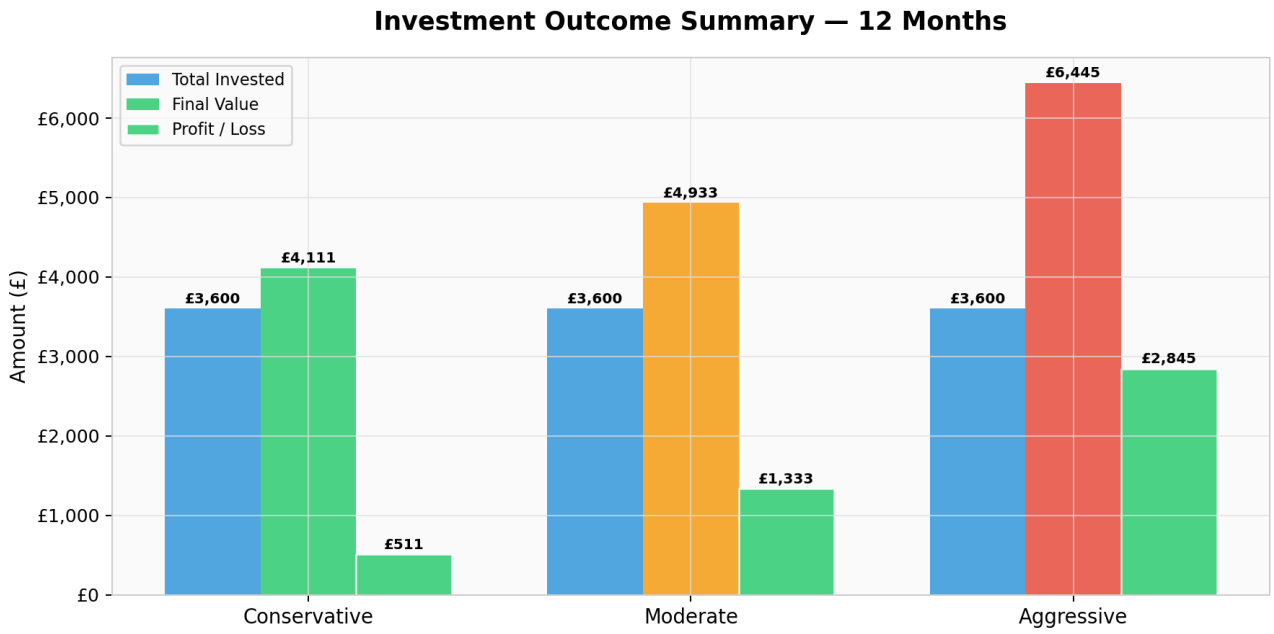


Final Value Percentiles (Month 12)

Percentile	Conservative	Moderate	Aggressive
Worst Case (10th)	£3,660	£3,723	£3,413
Lower Quartile (25th)	£3,786	£4,031	£4,025
Median (50th)	£3,942	£4,440	£4,986
Upper Quartile (75th)	£4,154	£4,999	£6,404
Best Case (90th)	£4,313	£5,462	£7,807

7. Profit & Loss Summary

The waterfall chart below compares total capital invested against projected final portfolio value and net profit/loss for each scenario.

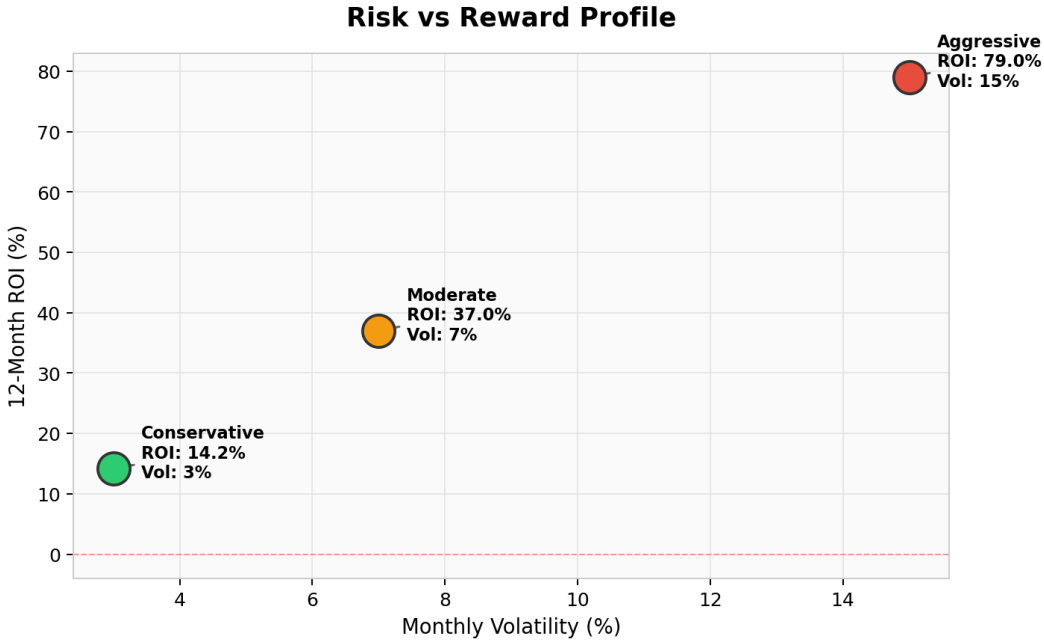


Per-Member Breakdown (12 months)

Metric	Conservative	Moderate	Aggressive
Individual Invested	£1,200	£1,200	£1,200
Individual Share (Final)	£1,370	£1,644	£2,148
Individual P&L	£170	£444	£948
Individual ROI	14.2%	37.0%	79.0%

8. Risk vs Reward Analysis

The risk-reward scatter plot positions each scenario by its monthly volatility (horizontal axis) against projected 12-month ROI (vertical axis). Higher volatility correlates with wider outcome ranges — the Aggressive scenario offers the highest potential returns but also the greatest risk of capital loss.



Key Risk Considerations

- **Market Risk** — All investments are subject to market fluctuations. The test phase intentionally uses small amounts (£100/month) to limit downside.
- **Liquidity Risk** — Some assets (angel investments, pre-seed) may be illiquid for extended periods. The Conservative scenario avoids this entirely.
- **Concentration Risk** — The Aggressive scenario is heavily weighted toward crypto and startups. Diversification within each asset class is essential.
- **Behavioural Risk** — Emotional decision-making during drawdowns is the biggest risk in any investment operation. The governance framework and group consensus model helps mitigate this.
- **Currency Risk** — Some investments (US stocks, crypto) are denominated in USD. GBP/USD fluctuations affect returns.

9. Operational Framework

To run the VC as a disciplined operation, the following framework is proposed:

Component	Detail
Investment Committee	All 3 members — unanimous or 2/3 majority for each investment
Monthly Meeting	First Sunday of each month — review portfolio, approve new investments
Contribution Deadline	1st of each month — £100 per member into shared account
Research Pipeline	NAVADA AI generates weekly opportunity briefs; members flag interests
Due Diligence	Minimum 48-hour research period before any investment decision
Position Sizing	No single investment exceeds 25% of total portfolio
Stop Loss	Automatic exit if any position drops 20% (adjustable by committee)
Reporting	AI-generated monthly P&L report emailed to all members
Record Keeping	All decisions documented — builds institutional knowledge and track record
Review Gate	Full strategy review at month 3, 6, and 12

10. Next Steps & Recommendations

Recommended Approach: Start Conservative, Graduate Up

Based on the projections, we recommend beginning with the **Conservative scenario** for months 1–3 to establish processes and build confidence. At the month-3 review, the committee can choose to shift toward the Moderate allocation based on performance and comfort level.

Immediate Action Items

1. **Week 1** — All members confirm participation and preferred scenario
2. **Week 2** — Open a shared investment account (e.g., Freetrade, Trading 212, or Wise)
3. **Week 2** — First £100 contribution from each member
4. **Week 3** — NAVADA AI delivers first research brief with 5–10 shortlisted opportunities
5. **Week 4** — First investment committee meeting; deploy first capital allocation
6. **Month 3** — First major review: assess returns, process efficiency, member satisfaction
7. **Month 6** — Mid-point review: decide whether to scale up, adjust strategy, or wind down
8. **Month 12** — Full evaluation: ROI, lessons learned, decision on permanent VC structure
