1. Executive Summary

NAVADA Edge is an AI-as-a-Service platform that delivers bespoke, autonomous AI agents to small businesses, solo consultants, and agencies. Each client receives a dedicated specialist AI agent **exclusively powered by Anthropic Claude**, running 24/7 on Telegram, with skills and behaviour custom-built to their brand and use case. NAVADA is an Anthropic-only platform — Claude is the sole AI model used across all Edge and IoT deployments.

Key Value Proposition

NAVADA Edge fills a gap in the market between generic AI chatbots (ChatGPT, Claude Pro) and enterprise-grade AI platforms (Sierra, 11x AI). For **£200/month**, clients get what would cost £50K-100K to build with a development team, or £5K-15K/month from an enterprise vendor.

£2,000	£200/mo	2 Days	24/7
SETUP FEE	HOSTED SAAS	TURNAROUND	AGENT UPTIME

Business Model

- **Tier 1 (Hosted SaaS):** £2,000 setup + £200/mo recurring. Agent hosted on NAVADA Edge server. Support included.
- **Tier 2 (Self-Hosted):** £3,000 one-off (agent build + Edge network setup). Client covers own API and hardware costs. Support at £50/hr.

Year 1 Projection (Moderate Scenario: 12 Clients)

£44,000	£1,600	75-90%
NET PROFIT (YEAR 1)	MRR BY MONTH 12	GROSS MARGIN

2. Product Definition

What Is NAVADA Edge?

NAVADA Edge is an AI home server deployment service. Clients receive a fully autonomous AI agent that operates as their personal or business assistant, accessible via Telegram 24/7. Each agent is:

- **Exclusively powered by Anthropic Claude** — frontier-level AI reasoning, analysis, and generation. NAVADA is an Anthropic-only platform.
- **Custom-built** — specialist skills, behaviour, personality, and knowledge tailored to the client's brand and workflow
- **Autonomous** — runs independently, responds in real-time, executes tasks, manages information
- **Always-on** — 24/7 availability via Telegram on any device (phone, tablet, desktop)

Example Agent Types

Agent Type	Target Client	Key Skills
Research Assistant	Consultants, analysts	Web research, report generation, data analysis, briefings
Sales Assistant	Agencies, freelancers	Lead research, email drafting, CRM updates, proposal generation
Operations Assistant	Small business owners	Scheduling, task management, reporting, process automation
Content Assistant	Marketing agencies, creators	Copy generation, social media drafting, image generation, SEO
Property Assistant	Estate agents, landlords	Market reports, tenant comms, listing descriptions, compliance checks
Recruitment Assistant	Recruiters, HR firms	Candidate sourcing, JD writing, market mapping, outreach

What Every Agent Includes

- Dedicated Telegram bot (client's own bot, branded)
- Custom system prompt defining personality, skills, and boundaries
- Persistent conversation memory
- Tool use: web search, file generation, image creation (DALL-E), email drafts
- Knowledge base: client-specific documents, FAQs, brand guidelines loaded
- Model switching: Sonnet (fast daily tasks) / Opus (complex analysis)
- Comprehensive e2e documentation and how-to guide

Client Deliverables

1. Live AI agent on Telegram (branded, custom skills)
2. Onboarding session (30-60 min walkthrough)
3. End-to-end documentation pack (PDF)
4. How-to guide for daily use
5. Knowledge base pre-loaded with client materials

3. Service Tiers & Pricing

Tier 1: Hosted on NAVADA Edge (SaaS)

Item	Cost	Notes
Setup fee (one-time)	**£2,000**	Agent build, skills configuration, brand tuning, KB loading, onboarding, documentation
Monthly subscription	**£200/mo**	Hosting, management, maintenance, API costs, support all included
Technical support	**Included**	Part of the SaaS subscription
Turnaround time	**2 business days**	From brief to live agent
Cancellation	Anytime	7-day grace on missed payment, then agent disconnected
Payments	Stripe	Recurring subscription, auto-retry on failure

> **Client value:** For £200/mo, the client receives a fully managed, bespoke AI agent with 24/7 availability, zero technical overhead, and included support. NAVADA handles all hosting, API management, updates, and maintenance.

Tier 2: Self-Hosted Edge Network

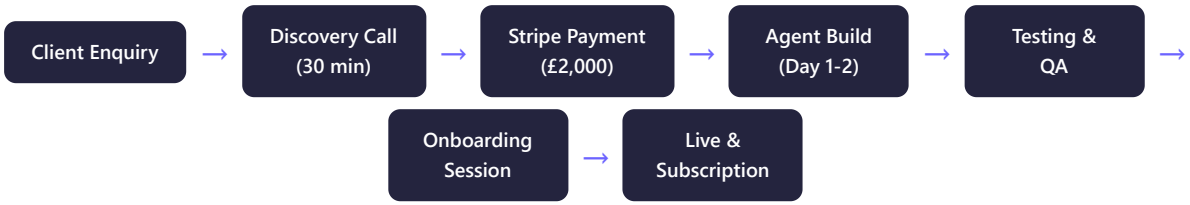
Item	Cost	Notes
Agent build (one-time)	**£2,000**	Same as Tier 1: bespoke agent, skills, KB, docs
Edge network setup (one-time)	**£1,000**	Hardware config, PM2 setup, Tailscale, monitoring, testing
Total upfront	**£3,000**	
Monthly fee	**£0**	Client covers own Anthropic API subscription
Hardware	Client covers	Laptop, ethernet cable, WiFi — client purchases and owns
Technical support	£50/hr	2-hour minimum booking, £50 non-refundable deposit
Turnaround	2 business days	From brief to live agent on client hardware

Support Pricing Matrix

	Hosted (Tier 1 SaaS)	Self-Hosted (Tier 2)
Rate	Free (included in £200/mo)	£50/hr
Minimum booking	N/A	2 hours (£100 minimum)
Deposit	N/A	£50 non-refundable (per session)
Method	TeamViewer + Tailscale	TeamViewer + Tailscale
Scope	Full agent + platform support	Edge network troubleshooting only

4. Client Onboarding Process

Process Flow (Tier 1: Hosted)



Day 1: Discovery & Payment

1. **Discovery call** (30 min): Understand client's business, use case, desired agent persona, key skills needed
2. **Brief document**: Capture agent name, personality, skills list, knowledge base sources, brand guidelines
3. **Payment**: £2,000 setup fee via Stripe Checkout (or Stripe Invoice for business clients)
4. **Subscription activation**: £200/mo recurring starts immediately via Stripe Subscriptions

Day 1-2: Agent Build

1. Create new Telegram bot via BotFather (client's branded bot name)
2. Configure system prompt (persona, skills, boundaries, brand voice)
3. Set up knowledge base folder with client materials
4. Configure tools (web search, file generation, email, image generation as needed)
5. Register slash commands with Telegram autocomplete
6. Set up PM2 process on NAVADA Edge server
7. Configure conversation memory and interaction logging
8. Configure per-client cost tracking
9. Testing: functional tests, edge cases, brand compliance

Day 2: Handover

1. **Onboarding session** (30-60 min): Live walkthrough of the agent, demo all commands, answer questions
2. **Deliver documentation pack**: e2e guide, command reference, troubleshooting tips
3. **Client confirms**: Agent is live and working as expected

Process Flow (Tier 2: Self-Hosted)

Same as above, plus:

1. Client purchases hardware (laptop, ethernet cable) — NAVADA provides spec recommendations
2. Remote setup session via TeamViewer: OS config, Node.js, PM2, Tailscale, Anthropic API key
3. Deploy agent to client's hardware
4. Configure Tailscale for remote access
5. Verify 24/7 operation, test fail-over scenarios
6. Deliver extended documentation: hardware management guide, restart procedures, API key rotation

5. Technical Architecture

Hosted Architecture (Tier 1)

Component	Technology	Purpose
Server	HP Laptop (Windows 11 Pro, always-on)	Hosts all client agents
Process Manager	PM2	Keeps agents running 24/7, auto-restart on crash
AI Engine	Anthropic Claude API (Sonnet / Opus) — exclusive, Anthropic-only	Powers all agent intelligence. No other AI providers used.
UI / Interface	Telegram Bot API (Telegraf framework)	Client-facing chat interface
Remote Access	Tailscale	Secure network for management
Memory	JSON files per client	Persistent conversation history
Knowledge Base	Client-specific KB folders	Custom documents, FAQs, brand materials
Cost Tracking	Per-client JSONL logs	Token usage, cost per model, billing data
Payments	Stripe	Subscriptions, invoices, webhooks

Per-Client Stack

Each client gets:

- Dedicated PM2 process (~60-80MB RAM)
- Unique Telegram bot token
- Isolated conversation history file
- Isolated knowledge base directory
- Custom system prompt
- Per-client cost tracking log

Capacity Planning

Metric	Current Capacity	Notes
RAM per client	60-80 MB	Node.js + Telegraf idle
Max hosted clients	10-15	On current HP laptop hardware
Bandwidth per client	Minimal	Text-based, API calls only
API cost per client	£20-40/mo	Average Sonnet usage; Opus for complex queries
Disk per client	~50-200 MB	Conversation history + KB files

Self-Hosted Architecture (Tier 2)

Identical stack deployed on client's hardware. NAVADA provides:

- Hardware specification guide (recommended laptop, always-on setup)

- Pre-configured software package (Node.js, PM2, agent code, Tailscale)
- Remote deployment via TeamViewer
- Tailscale integration for ongoing remote support access
- Client manages their own Anthropic API key and subscription

6. Payment & Billing (Stripe)

Payment Structure

Payment Type	Tier 1 (Hosted)	Tier 2 (Self-Hosted)
Setup fee	£2,000 (Stripe Checkout / Invoice)	£3,000 (Stripe Invoice)
Monthly subscription	£200/mo (Stripe Subscriptions)	N/A
Support sessions	Included	£50 deposit (Stripe Payment Link) + hourly invoice

Stripe Integration Flow

Subscription Lifecycle

Event	Action	Automation
Payment succeeds	Agent continues running	Stripe webhook → log payment
Payment fails	Stripe auto-retries (3 attempts over 7 days)	Email notification to client
7 days unpaid	Agent disconnected (PM2 stop)	Stripe webhook → `pm2 stop client-bot`
Client pays overdue	Agent reconnected (PM2 restart)	Stripe webhook → `pm2 restart client-bot`
Client cancels	Subscription ends at period end	Agent stopped at period end

Self-Hosted Support Billing

1. Client requests support session
2. Client pays £50 non-refundable deposit via Stripe Payment Link
3. Session booked (2-hour minimum)
4. Post-session: Stripe Invoice for total hours at £50/hr (minus deposit)
5. Example: 3-hour session = £50 deposit + £100 invoice = £150 total

7. Support & SLA Model

Tier 1 (Hosted) Support

Aspect	Detail
Cost	Included in £200/mo subscription
Response time	Within 24 hours (business days)
Channel	Telegram (direct message to Lee) or email
Scope	Agent issues, skill adjustments, KB updates, bug fixes
Exclusions	Major agent redesigns (quoted separately), client-side Telegram issues

Tier 2 (Self-Hosted) Support

Aspect	Detail
Rate	£50/hr, 2-hour minimum (£100 minimum charge)
Deposit	£50 non-refundable (per booking)
Method	TeamViewer remote access + Tailscale
Booking	Client requests via email/Telegram, pays deposit, session scheduled
Scope	Edge network troubleshooting, hardware issues, connectivity, PM2, Tailscale

What's Included vs Extra

Included (Tier 1 £200/mo)	Extra (Quoted Separately)
Bug fixes	Major agent redesign / rebuild
Minor skill adjustments	Adding entirely new skill categories
KB updates (swap documents)	Large-scale data migration
Model switching (Sonnet/Opus)	Custom integration to third-party APIs
Monitoring & uptime management	Hardware procurement / physical setup
Security patches	Training sessions for client staff

Disconnection Policy (Hosted Clients)

> **Payment Grace Period:** Clients have 7 days from a missed payment to resolve the issue. After 7 days, the agent is automatically disconnected via PM2 stop. The agent can be reactivated immediately upon payment of outstanding balance. No data is deleted for 30 days after disconnection.

8. Client Lifecycle Management

Lifecycle Stages

Lead / Enquiry → Demo / Discovery → Payment & Onboarding → Active Client → Retention & Upsell → Renewal / Churn

Stage Details

Stage	Duration	Activities	Owner
Lead	1-7 days	Enquiry received, qualify need/budget, send info pack	Lee
Demo	1-2 days	Live Telegram demo (grant guest access), discovery call, capture brief	Lee
Onboarding	2 days	Payment, agent build, testing, handover session, documentation	Lee + Claude
Active	Ongoing	Agent running 24/7, monthly billing, monitoring, minor support	Automated + Lee
Retention	Monthly	Check-in message, usage review, suggest new skills, referral ask	Lee
Upsell	Quarterly	Offer new agent types, Pro tier, additional skills, staff training	Lee
Churn prevention	As needed	Usage monitoring, reach out if usage drops, offer call	Lee

Churn Prevention Triggers

- Agent unused for 7+ days → proactive check-in message
- Payment fails → immediate email + Telegram notification
- Support ticket unresolved >48 hours → escalate and personal call
- Client requests cancellation → offer 1 month free to discuss improvements

9. Competitive Analysis & Market Position

Market Landscape

Company	Product	Pricing	Custom	Setup Time
NAVADA Edge	Bespoke AI agent (Telegram)	£2K + £200/mo	Fully bespoke	2 days
Relevance AI	No-code agent builder	$199-599/mo	Templates	Self-serve
Lindy AI	Pre-built assistants	$49-499/mo	Limited	Self-serve
Sierra AI	Enterprise customer agents	£10K+/mo	Yes	Weeks-months
11x AI	AI sales/SDR agents	$5K-15K/mo	Sales only	Weeks
Cognition (Devin)	AI software engineer	$500/mo	Code only	Self-serve
ChatGPT Team	Shared GPT access	$25-30/user/mo	No	Instant
Claude Pro	Chat interface	$20/user/mo	No	Instant

NAVADA Edge Competitive Advantages

Factor	NAVADA Edge	Most Competitors
Customisation	Fully bespoke per client	Templates / drag-and-drop
Price	£200/mo for dedicated agent	£500-15K/mo for comparable
Human touch	Lee personally builds & supports	Self-serve, ticket-based
Speed	2 days brief to live	Weeks to months
Interface simplicity	Telegram (zero learning curve)	New platform / login
Self-host option	Yes (Tier 2)	Almost never offered
Transparency	Client sees what it does and costs	Black box, hidden fees

Honest Weaknesses

Factor	Score	Notes
Value for money	9/10	Unbeatable at the price point
Customisation	9/10	Hand-built, not template-based
Time to live	9/10	2-day turnaround is exceptional
Technical capability	8/10	Claude API + full tool use is frontier-level
Scalability	5/10	Single server, needs infra investment past ~15 clients
Brand / trust	4/10	Early stage, no case studies yet

Client self-service	3/10	No client portal or analytics dashboard
Redundancy / SLA	3/10	Single point of failure

10. Financial Projections (Year 1)

Assumptions

- Client mix: 70% hosted (Tier 1) / 30% self-hosted (Tier 2)
- API cost per hosted client: ~£30/mo average (Sonnet primary, occasional Opus)
- Self-hosted clients average 2 support hours/month at £50/hr
- Churn rate: ~5% monthly for hosted clients (conservative)
- No additional hardware investment (using existing NAVADA server)

Conservative Scenario (6 Clients in Year 1)

1 new client every 2 months: 4 hosted + 2 self-hosted

Revenue Stream	Calculation	Total
Hosted setup fees	4 x £2,000	£8,000
Self-hosted fees	2 x £3,000	£6,000
Monthly recurring	Cumulative (4 hosted clients over 12 months)	£7,200
Support revenue	2 self-hosted x 2 hrs/mo x £50 x ~8 months avg	£1,600
Support deposits	~24 sessions x £50	£1,200
Gross Revenue		**£24,000**
API costs (hosted)	4 clients x £30/mo x avg 8 months	-£960
Net Profit		**£23,040**

Moderate Scenario (12 Clients in Year 1)

1 new client per month: 8 hosted + 4 self-hosted

Revenue Stream	Calculation	Total
Hosted setup fees	8 x £2,000	£16,000
Self-hosted fees	4 x £3,000	£12,000
Monthly recurring	Cumulative (8 hosted over 12 months)	£13,600
Support revenue	4 x 2 hrs/mo x £50 x ~6 months avg	£2,400
Support deposits	~48 sessions x £50	£2,400
Gross Revenue		**£46,400**
API costs	8 x £30/mo x avg 6 months	-£1,440
Net Profit		**£44,960**

Optimistic Scenario (24 Clients in Year 1)

2 new clients per month: 16 hosted + 8 self-hosted

Revenue Stream	Calculation	Total
Hosted setup fees	16 x £2,000	£32,000
Self-hosted fees	8 x £3,000	£24,000
Monthly recurring	Cumulative (16 hosted over 12 months)	£28,800
Support revenue + deposits	8 x 2hrs/mo x £50 x ~6mo + deposits	£9,600
Gross Revenue		**£94,400**
API costs	16 x £30/mo x avg 6 months	-£2,880
Net Profit		**£91,520**

Summary

£23K	£45K	£92K
CONSERVATIVE	MODERATE	OPTIMISTIC

Year 2 Baseline (Recurring Only)

By Month 12, the recurring MRR from hosted clients carries into Year 2 as baseline revenue before adding any new clients:

Scenario	MRR at Month 12	Year 2 Baseline (recurring only)
Conservative	£800/mo	£9,600/yr before new clients
Moderate	£1,600/mo	£19,200/yr before new clients
Optimistic	£3,200/mo	£38,400/yr before new clients

11. Client Acquisition Strategy

Phase 1: Immediate (Month 1-2)

Channel	Action	Expected Outcome
LinkedIn	Weekly posts showing NAVADA Edge in action. Demo videos from phone. "I built an AI Chief of Staff" content series. Leverage existing LinkedIn posting pipeline.	2-5 enquiries/month
Professional network	Direct message 20+ contacts (Generali, ex-Farfetch/DHL/Shutterstock colleagues). 30-second Telegram demo.	1-2 warm leads
Prospect pipeline	Repurpose existing prospect-pipeline.js for NAVADA Edge outreach. Target small agencies and consultancies.	1-3 cold leads/week

Phase 2: Traction (Month 2-4)

Channel	Action	Expected Outcome
Live demos	Use multi-user guest system: /grant access for 7-day trial. Product sells itself.	30-50% conversion from demo to paid
Communities	Reddit r/selfhosted, r/homelab, Hacker News "Show HN", indie hacker forums, AI communities.	Organic inbound
Agency outreach	Target marketing agencies, recruitment firms, PR shops. They need research assistants and can't build their own.	1-2 agency clients

Phase 3: Growth (Month 4-8)

Channel	Action	Expected Outcome
Case studies	Publish results from first clients: "How [Client] automated 20 hrs/week with NAVADA Edge"	Social proof, inbound
Referrals	Offer 1 month free for every referral that converts	1-2 referral clients/quarter
Freelance platforms	Fiverr/Upwork: "I'll build you a personal AI agent on Telegram" — upsell to full Edge service	Lead gen channel

Phase 4: Scale (Month 8-12)

Channel	Action	Expected Outcome
Productise	Pre-built agent templates (Research, Sales, Ops) reduce build time to half a day	Higher margin per client
YouTube/content	"How I built an AI home server" technical content	Organic SEO traffic
Partnerships	Partner with business coaches, accelerators, co-working spaces	Recurring referral pipeline

Target Client Profiles

1. **Solo consultants** — bill £500-1000/day, £200/mo is trivial for an AI research assistant
2. **Small agency founders** — 5-20 person shops needing AI without hiring an AI engineer
3. **Property managers / estate agents** — market reports, tenant comms, listings
4. **Recruitment consultants** — candidate sourcing, market mapping, outreach
5. **Startup founders** — want a "CTO in a box" or ops automation
6. **Coaches / trainers** — content creation, client comms, scheduling

12. Risk Assessment

Risk	Likelihood	Impact	Mitigation
Single server failure (hardware crash)	Medium	High — all hosted clients down	Daily backups to cloud. Spare laptop on standby. Long-term: migrate to cloud VPS for redundancy.
Internet outage at NAVADA server	Medium	High — all clients offline	Tailscale provides alternative routing. 4G/5G backup dongle. Long-term: dual ISP.
Anthropic API price increase	Low-Medium	Medium — margin squeeze	Monitor API costs per client. Model switching (Sonnet for routine, Opus only for complex). Can pass cost increase to clients with notice.
Anthropic API downtime	Low	High — all agents non-functional	Anthropic has strong uptime track record. Agent queues messages and retries. NAVADA is committed to Anthropic-only — no multi-provider fallback, keeping the stack clean and reliable.
Client churn	Medium	Medium — revenue decline	Monthly check-ins, usage monitoring, proactive skill improvements. Referral incentives increase stickiness.
Competition from no-code tools	Medium	Low — different market segment	NAVADA Edge is bespoke, competitors are templates. Keep differentiating on customisation and service.
Scaling past 15 clients on single server	Low (Year 1)	Medium	At 12+ clients, invest in second server or cloud VPS. Budget ~£50/mo for cloud hosting.
Lee's time constraint (Generali full-time)	High	Medium — limited capacity	Automate provisioning. Build templates. 2-day builds done on evenings/weekends. Claude handles monitoring.
Data/privacy concerns	Low-Medium	High if mishandled	Per-client isolation. Clear T&Cs on data handling. Self-hosted option for privacy-sensitive clients.

13. Operational Processes (Day-to-Day)

Daily Operations

Task	Frequency	Owner	Automated?
Monitor PM2 processes (all client bots)	Continuous	PM2 + Daily Ops Report	Yes
Check per-client API costs	Daily	Cost tracker + Ops Report	Yes
Monitor Stripe payments	Daily	Stripe dashboard / webhooks	Yes
Respond to client support queries	As needed	Lee (via Telegram)	No
Review interaction logs for issues	Weekly	Lee	No

Client Agent Provisioning (Repeatable Process)

1. Create Telegram bot via BotFather → obtain bot token
2. Copy client-bot-template.js → `client-bots/clientname-bot.js`
3. Configure: bot token, system prompt, tool permissions, KB path
4. Create KB directory: `client-bots/kb/clientname/`
5. Load client documents into KB
6. Add to ecosystem.config.js: new PM2 app entry
7. Start: `pm2 start ecosystem.config.js --only clientname-bot`
8. Test: send messages, verify all tools, check cost logging
9. Register slash commands with Telegram
10. Create Stripe subscription for client
11. Send documentation pack to client
12. Onboarding call

Monthly Processes

- Review all client usage metrics and API costs
- Generate per-client cost vs revenue report
- Send monthly usage summary to clients (optional, builds trust)
- Check for KB updates needed (client feedback)
- Review and update agent skills based on client usage patterns
- Stripe revenue reconciliation
- Proactive client check-in for retention

14. Scalability Roadmap

Phase 1: Foundation (0-10 Clients)

Item	Status
Single NAVADA server (HP Laptop)	Ready
PM2 process management	Ready
Per-client bot template	To build
Stripe integration	To build
Per-client cost tracking	Ready
Tailscale for remote management	Ready

Phase 2: Growth (10-25 Clients)

Investment	Cost	Why
Second server or cloud VPS	£30-100/mo	Redundancy + capacity
Automated provisioning script	Dev time only	Reduce 2-day build to half day
Client dashboard (simple web portal)	Dev time only	Usage stats, billing, self-service KB updates
Monitoring & alerting	Free (UptimeRobot)	Instant notification if client bot goes down

Phase 3: Scale (25-100 Clients)

Investment	Cost	Why
Cloud infrastructure (AWS/Hetzner)	£200-500/mo	Multi-server, auto-scaling
Container orchestration (Docker/K8s)	Dev time	Each client = container, easy deploy/scale
Hire part-time support person	£1,000-2,000/mo	Handle Tier 1 support, free Lee for sales & builds
Full client portal with Stripe integration	£2,000-5,000 dev	Self-serve billing, KB management, usage analytics

Long-Term Vision

- **White-label offering:** Other consultants resell NAVADA Edge under their brand
- **Agent marketplace:** Pre-built specialist agents that clients can subscribe to instantly
- **API platform:** Developers build on NAVADA Edge infrastructure
- **Enterprise tier:** Multi-agent deployments, SSO, audit logs, compliance

15. KPIs & Success Metrics

Monthly KPIs

KPI	Target (Month 6)	Target (Month 12)
Total active clients	4-6	8-12
Monthly Recurring Revenue (MRR)	£800-1,200	£1,600-2,400
Client churn rate	<5%/mo	<5%/mo
API cost per client	<£40/mo	<£35/mo
Gross margin (hosted)	>80%	>85%
Time to deploy new client	<2 days	<1 day (with templates)
Client satisfaction	4+/5 rating	4.5+/5 rating
Referral rate	10%	20%

Financial KPIs

Metric	Formula	Target
Gross margin	(Revenue - API costs) / Revenue	>85%
Customer Lifetime Value (CLV)	Avg monthly revenue x avg months retained	>£3,000
Customer Acquisition Cost (CAC)	Sales/marketing spend / new clients	<£200
CLV:CAC ratio	CLV / CAC	>10:1
Payback period	CAC / monthly revenue per client	<1 month (covered by setup fee)

Operational KPIs

Metric	Target
Agent uptime	>99% (PM2 auto-restart)
Support response time (hosted)	<24 hours
Average onboarding time	≤2 business days
Monthly support hours per client	<1 hour (hosted, included)
